

Attention Subcontractors:

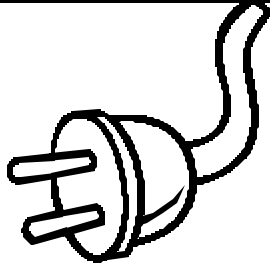

What you should know

If you are performing repairs on electronics or appliances, even as a subcontractor, you must hold a valid registration issued by the Bureau of Electronic and Appliance Repair (BEAR). Locations serving only as drop-off points must be registered, even if the repairs are not performed onsite.

If you are not currently registered, call the bureau to get into compliance. Register immediately and you will not be penalized for practicing without a license. It is important to get registered immediately so that your business can serve customers legally. Businesses found operating without a license are subject to administrative fines and/or criminal penalties.

Your initial registration fee as an appliance or electronic repair dealer is \$165. Annual renewal fees are \$165. If you perform repairs to both electronics and appliances, you can get a combined registration for \$325 initial fee and \$300 for annual renewals.
